# KONGKIT YEESAI (IKKIW)

## PORTFOLIO

https://kongkitqq.github.io/portkongkit/

## CONTACT

**Tel NO**: 088-7848844

**E-mail**: kongkit.ys@gmail.com

**Github**: github.com/Kongkitqq

## SKILLS

- **Languages & Frameworks:** Python, JavaScript, HTML/CSS, SQL, C, Go, Node.js, React, Vue.js, FastAPI
- **Databases**: PostgreSQL, MySQL, MongoDB
- **Machine Learning & AI:** TensorFlow, scikit-learn, Keras, Pandas, NumPy
- **Tools**: Git, Docker, Postman, Swagger, Figma, Jira

## LANGUAGES

- English ( Fair )
- Thai ( Fluent )

## SUMMARY

As a soon-to-graduate ICT student at Prince of Songkla University, I bring practical backend experience from a tech co-op and internships. I am skilled in building APIs (Node.js, FastAPI), managing databases, and integrating AI models into web apps. With hands-on experience delivering production-ready modules via Git, I am a team player eager to learn and seeking a Junior Backend or Software Engineer role.

## EDUCATIONAL BACKGROUND

**Prince of Songkla University, Hat Yai** 2022 - PRESENT

Bachelor of Science in Information and Communication Technology

**GPAX:** 3.62

## EXPERIENCE

### COOPERATIVE

**Internet Thailand Public Company Limited (INET)**

**Software Trainee (Co-op)** November 10, 2025 – March 6, 2026

- Developed Node.js backend APIs for an internal evaluation system ("Challenge Period") and integrated them with existing HR modules.
- Managed MongoDB databases for evaluation forms and tested APIs using Postman to ensure correct functionality.
- Helped transform a manual paper-based process into a fully digital system with real-time status tracking.
- Collaborated via Git for version control and successfully delivered the module for deployment to the production environment.

### INTERNSHIP

**Education and Innovative Learning Academy (EILA)**

**Web and Mobile Developer Intern** April 17, 2025 – June 6, 2025

- Developed and integrated full-stack web applications for a booth reservation system using HTML, Tailwind CSS, JavaScript, and Node.js.
- Managed PostgreSQL databases and created Software Requirements Specification (SRS) documents to guide project development.
- Gained practical experience with deployment platforms (Railway, Render) and database management tools (pgAdmin).

### WORK SCHOLARSHIP

**Image Segmentation Web Application** 2025

- Built a full-stack web app for Image Segmentation — users upload images and the system uses AI to automatically segment objects, displaying color-coded overlay results for analysis and model comparison. Built with React + Vite and FastAPI.
- Integrated 4 models: DeepLabV3, FCN, LRASPP (Semantic) and Mask R-CNN (Instance) with PyTorch and ONNX Runtime. Supported batch upload, per-image model selection, and side-by-side comparison.

## PROJECTS

**Tomato Leaf Disease Classifier (CNN) - Final Project** 2025

- Designing a web app to classify tomato leaf diseases using CNN (InceptionV3 & EfficientNetB0).
- Models are trained on a custom dataset of 10,000 images (5 classes) via Kaggle, with image augmentation and transfer learning.
- Built with React (frontend), FastAPI (backend), and PostgreSQL.
- Features include user image upload, prediction history, and admin disease management with role-based access.
